A comprehensive assessment of the entire campus, as well as a study of energy efficiency, opportunities for saving and the creation of a biodiversity survey and an abundance of our local environment and activities. A project was initiated this year that will continue to provide a one-of-a-kind experience for our visitors, offering a unique opportunity to see and experience the natural beauty of our local area.

The Agriculture Research Centre (ARC) is a centre for biodiversity research and applied environmental research. It is home to over 50 researchers and scientists who conduct cutting-edge research in a wide range of disciplines, from agriculture to environmental science. The ARC is supported by a variety of government and private sponsors, including the Nova Scotia government and the Canadian Foundation for Innovation.

The ARC’s research focus is on sustainable agriculture and the protection of marine environments. The centre conducts research on topics such as climate change, ocean acidification, and the impact of human activities on marine ecosystems. The ARC also has a strong emphasis on outreach and engagement, working with farmers, industry partners, and the general public to share research findings and promote sustainable practices.

Our vision is to create a world where people and nature coexist in harmony, where agriculture and the environment are protected, and where future generations can enjoy the benefits of sustainable development.

Our mission is to conduct cutting-edge research in the areas of agriculture, biology, and environmental science. We aim to develop innovative solutions to the challenges faced by society, and to provide leadership in the development of sustainable practices.

Our values are:

- Excellence in research and education
- Innovation and creativity
- Collaboration and partnership
- Respect for diversity and inclusion
- Social and environmental responsibility

Our projects and initiatives aim to advance our understanding of the role of agriculture in society, and to develop practical solutions to help shape a more sustainable future for all.
